

PANTA V20 Package Manifest

PANTA Product and Engineering

27 August 2026

Contents

1	Release identity	1
2	Package entry points	1
3	Principal deliverables	2
4	Implemented product layer	2
4.1	New V20 objects	2
4.2	Synthetic benchmark cases	2
5	Product evidence	2
6	Acceptance evidence	2
7	Package topology	3
8	Authority and precedence	3
9	Production boundary	3
10	Integrity controls	4

1 Release identity

- **Product:** PANTA Deal World
- **Release:** V20
- **Semantic version:** 20.0.0
- **Base:** V19.B / 19.1.0
- **Release class:** additive venture/deep-tech product extension with V19.B integrity non-regression
- **Status:** complete product-experience, frontend, synthetic fixture and integration-handoff release

V20 extends the one Live Investment Case kernel to conversation-heavy, sparse-evidence, early-stage venture diligence. It preserves the V19.B rooms, state model, authority, execution, settlement, bitemporal replay, fixture-free Connected core and explicit operating modes.

2 Package entry points

- macOS launcher: 01_PRODUCT_BUILD/launchers/START_PANTA_V20.command
- Windows launcher: 01_PRODUCT_BUILD/launchers/START_PANTA_V20_WINDOWS.bat
- Offline demo: 01_PRODUCT_BUILD/launchers/OPEN_OFFLINE_DEMO.html
- Start guide: 00_START_HERE/README_START_HERE.md
- Release report: 00_START_HERE/PANTA_V20_Release_and_Acceptance_Report.pdf

3 Principal deliverables

1. PANTA_V20_Release_and_Acceptance_Report.pdf
2. PANTA_V20_Package_Manifest.pdf
3. 02_PRODUCT_EXPERIENCE/PANTA_V20_Product_Experience_Specification.pdf
4. 02_PRODUCT_EXPERIENCE/PANTA_V20_Product_User_Guide.pdf
5. 03_SCREEN_ATLAS/PANTA_V20_Annotated_Screen_Atlas.pdf
6. 04_INFORMATION_ARCHITECTURE_AND_FLOWS/PANTA_V20_Navigation_Flows_and_State_Model.pdf
7. 05_DESIGN_SYSTEM_AND_INTERACTION/PANTA_V20_UI_System_and_Engineering_Handoff.pdf
8. 06_RESEARCH_AND_VALIDATION/PANTA_V20_UX_Research_and_Validation_Plan.pdf
9. 07_ENGINEERING_CONTRACTS_AND_ADAPTERS/PANTA_V20_Venture_Integration_Contract.pdf
10. 07_ENGINEERING_CONTRACTS_AND_ADAPTERS/API/PANTA_V20_API_REFERENCE.pdf
11. 08_TEST_EVIDENCE/PANTA_V20_Test_Evidence_Report.pdf

Editable Markdown sources are packaged beside or beneath the corresponding PDFs.

4 Implemented product layer

4.1 New V20 objects

- Interaction, Participant and Utterance;
- hierarchical venture archetype and governed Lens;
- Candidate Discrepancy;
- deterministic Derivation;
- AI Hypothesis;
- Agent Mission;
- Spine Change Proposal;
- Condition Edge;
- Validation Envelope;
- venture financing, cap table, dilution, runway, milestones, governance and reserves.

4.2 Synthetic benchmark cases

- **PROJECT-KEYSTONE:** buyout benchmark;
- **PROJECT-ORION:** growth-equity benchmark;
- **PROJECT-TETHYS:** pre-revenue deep-tech venture benchmark.

Tethys is wholly synthetic and resynthesized. It contains no actual Pelagon, ACE or confidential deal material.

5 Product evidence

- 51 packaged screen states: 40 inherited V19/V19.B core surfaces and 11 V20 venture-extension states;
- 20 rendered architecture/flow diagrams, including six V20 diagrams;
- one 1920x1080 V20 venture walkthrough;
- three fixture packs served through the same generic frontend;
- 23 typed public JSON Schemas;
- pure compiler-bundle and Transition Engine adapters;
- stateful synthetic Mock Connected API;
- date-driven bitemporal projections and event-derived read-only replay.

6 Acceptance evidence

The packaged suite reports **49/49 passing checks**. Coverage includes:

- fixture independence and confidential-safe resynthesis;
- transcript epistemic boundaries;
- generated discrepancies and deterministic derivations;
- hypothesis admission boundaries;

- mission authority and data-egress policy;
- Lens facts-hash purity;
- governed spine changes;
- venture-financing reconciliation;
- bitemporality and replay;
- Human Stop and blocked-region behavior;
- authority, execution, settlement and idempotency negative paths;
- browser rendering, mobile read/review and console cleanliness.

Machine-readable results are in `08_TEST_EVIDENCE/V20_TEST_RESULTS.json`.

7 Package topology

Directory	Role
00_START_HERE	release identity, reading order, manifest and integrity controls
01_PRODUCT_BUILD	runnable frontend, synthetic reference API, fixtures and launchers
02_PRODUCT_EXPERIENCE	product specification and user guide
03_SCREEN_ATLAS	inherited core screens, V20 screens, contact sheets and manifests
04_INFORMATION_ARCHITECTURE_AND_FLOWS	diagrams, editable sources and state/navigation model
05_DESIGN_SYSTEM_AND_INTERACTION	UI system, components, accessibility, responsive and motion
06_RESEARCH_AND_VALIDATION	validation plan, audits, metrics and protocols
07_ENGINEERING_CONTRACTS_AND_ADAPTERS	schemas, API, adapters, samples and integration contract
08_TEST_EVIDENCE	executable suite, results and browser evidence
09_DEMO	fixture mirrors, golden path and V20 walkthrough
10_REFERENCE_ARCHIVE	superseded V16-V19.B material, clearly separated from the active release

8 Authority and precedence

The precedence hierarchy remains:

1. frozen versioned machine contracts and conformance tests;
2. the latest applicable Engineering Source of Truth;
3. V18/V19.B integrity contracts;
4. V20 product and integration specifications;
5. screenshots, walkthroughs and synthetic runtime behavior.

No mock behavior may weaken a stricter frozen contract.

9 Production boundary

The release does not certify:

- production authentication, SSO or enterprise RBAC;
- tenant-aware production Case Store persistence;
- a live autonomous research service;
- human outreach or physical-test execution;
- real external delivery or write-back;
- Fabrizio's production compiler/Case Store;
- Anto's independently deployed production Transition Engine or its separate full conformance evidence.

Connected mode deliberately refuses fixture-backed data. Mock Connected and Offline Demo are persistently disclosed as synthetic and without external effects.

10 Integrity controls

- `PACKAGE_MANIFEST.json` records release facts and principal artifacts.
- `PACKAGE_INVENTORY.csv` lists substantive payload files, sizes, MIME types, roles and hashes.
- `CHECKSUMS.sha256` covers every regular package file except itself.
- `INTEGRITY_SUMMARY.json` records the verification rule and acceptance baseline.
- No nested ZIP archives, symlinks, runtime sessions, uploads, bytecode or cache files are included.
