

PANTA V19.B Package Manifest

Release: V19.B / 19.1.0 **Date:** 27 August 2026

V19.B is the corrective implementation, fixture and demonstration baseline over V19.0.0. It preserves the V18/V19 product architecture while correcting case generalization, bitemporality, epistemic classification, typed integration, transition-object coverage and pricing language.

VERIFIED RESULT	SCOPE
PASS - 22/22 V19.B acceptance and regression checks	Bundled product, fixtures, schemas, adapters, stateful mock API and browser paths. Production services are not certified.

Release-control documents

Artifact	Role
README_START_HERE.md	Opening instructions, mode behavior and release boundary.
PANTA_V19B_Release_and_Acceptance_Report.pdf	Readable release decision and evidence summary.
PACKAGE_MANIFEST.json	Machine-readable release identity and scope.
PACKAGE_INVENTORY.csv	Path, size, MIME type, role and SHA-256 for payload artifacts.
CHECKSUMS.sha256	SHA-256 for every package file except the checksum file itself.
V19B_TEST_RESULTS.json	Machine-readable 22-check acceptance result.

Operating modes

CONNECTED - requires a real external backend; the bundled server refuses this mode rather than serving fixture data.

MOCK CONNECTED - stateful, synthetic and server-gated reference runtime; no external effects.

OFFLINE DEMO - explicit portable fixture mode for read/review and simulated flows.

Package structure

Folder	Purpose
00_START_HERE	Release navigation, addenda, manifest, inventory, checksums and acceptance summary.
01_PRODUCT_BUILD	Fixture-free frontend core, mock API, explicit fixtures, contracts and launchers.
02_PRODUCT_EXPERIENCE	Complete V19 professional documents plus authoritative V19.B change specification.
03_SCREEN_ATLAS	Original V19 authoritative screen exports and manifests.
04_INFORMATION_ARCHITECTURE_AND_FLOWS	Information architecture, task flows, state, service and lineage diagrams.
05_DESIGN_SYSTEM_AND_INTERACTION	Tokens, components, content, motion, responsive and accessibility specifications.
06_RESEARCH_AND_VALIDATION	Research plan, audit resolution and preserved V19 evidence.
07_ENGINEERING_CONTRACTS_AND_ADAPTERS	Eight typed schemas, API reference, pure mapping adapters and samples.
08_TEST_EVIDENCE	Executable V19.B suite, raw results, browser captures and categorized reports.
09_DEMO	Explicit fixture packs, scripts, screenshots and walkthrough videos.
10_REFERENCE_ARCHIVE	Superseded package-control artifacts and historical/concept references.

Authority and supersession

The original V19 professional PDFs remain applicable for unchanged product architecture and visual surfaces. The V19.B report, change specification, release notes, public schemas, fixture packs, adapters, test results and this manifest supersede V19.0.0 wherever the six corrective requirements are concerned.

Production boundary

This package does not claim production authentication, SSO, enterprise RBAC, production Live Investment Case persistence, tenancy or security infrastructure; real external messages or write-back; Fabrizio's production compiler/Case Store; or Anto's separate production Transition Engine and full frozen 22-case runtime evidence.

Integrity rule

Artifact identity is the logical artifact name, semantic version and SHA-256. Verify the package from its root with `sha256sum -c 00_START_HERE/CHECKSUMS.sha256`. The inventory omits only itself and the checksum control file to avoid self-referential hashes; the checksum file covers the inventory and every other package file.
