

UX Research & Validation Plan

The practitioner research and validation protocol for the V19 product experience.

DOCUMENT | UX Research & Validation Plan

RELEASE | V19.0.0

DATE | 27 August 2026

STATUS | Integration-ready safe demo and engineering handoff; production identity and external effects are not claimed.

1. Research objective

Validate that investment professionals can understand source grounding, institutional state and required action quickly enough to trust PANTA in live underwriting and re-underwriting.

2. Target participants

Role	Sample	Critical perspective
Associate / analyst	4-6	Source inspection, corrections, work queue and artifact updates.
Principal / deal lead	3-4	Economic consequence, exception handling and authority routing.
Partner / IC member	3-4	Situation awareness, dissent, decision boundary and attestation.
Operating / portfolio lead	2-3	Post-underwriting state, intervention and replay.
Modeling / finance specialist	2-3	Cell/formula fidelity, lineage and scenario mechanics.

3. Critical task set

- Ingest a new PDF and find its extracted claim.
- Correct a mis-bound claim and verify persistence.
- Locate every claim supporting a question.
- Inspect a workbook cell, formula and precedent.
- Switch as-of state and explain what changed.
- Complete the material-change golden path.
- Attempt an illegal Decision Room access and explain the block.
- Switch cases and confirm no residual data contamination.

4. Metrics

Metric	Target
Time to orient in Fund Command	< 30 seconds
Time to trace a claim to source	< 20 seconds
Question-binding comprehension	>= 90% correct
State distinction: Working/Current/Approved	>= 90% correct
Authority-gate comprehension	>= 95% correct
Source-ingest completion awareness	>= 90% notice correct stage/result
Critical-task completion	>= 85% unassisted
Severe trust error	0

5. Test protocol

- Use think-aloud without explaining the architecture in advance.
- Run one connected-like synthetic session and one negative path.
- Capture task time, error, hesitation, recovery, confidence and correction burden.
- Replay the session and ask participants to reconstruct what was known, believed, approved and open.
- Separate product confusion from missing backend capability.

6. Accessibility validation

- Keyboard-only complete path.
- Screen reader on mode chooser, Source Center, Object Aperture, Decision Room and status announcements.
- Zoom 200% and text spacing.
- prefers-reduced-motion and manual override.
- Contrast and non-color state labels.
- Viewport matrix: 1920, 1600, 1440, 1280, 1051, 1050, 1024, 768 and 390.

7. Research outputs

- Prioritized findings with severity and affected role.
- Task-flow failure map.
- Terminology/copy corrections.
- Component and contract changes.
- Validated demo sequence.
- Go/no-go recommendation for ACE and Scout pilots.
