

Test Evidence Report

Automated API, browser, responsive, contract, core-purity and negative-path evidence.

DOCUMENT | Test Evidence Report

RELEASE | V19.0.0

DATE | 27 August 2026

STATUS | Integration-ready safe demo and engineering handoff; production identity and external effects are not claimed.

1. Automated result

89 of 89 automated checks passed; 0 failed.

Suite	Pass	Fail
Core purity	4	0
Input	7	0
Output	10	0
State	6	0
Artifacts	5	0
Backend	10	0
Forcing	6	0
Fixture	12	0
Syntax	10	0
API	8	0
Responsive	8	0
Browser	3	0

2. What is covered

- Core purity and fixture isolation
- Input and Source Center behavior
- Claims filters, sorting, pagination, search and as-of state
- Object Aperture, cells, PDF source viewer and version history
- Admission, authority, course-specific packages and settlement
- Granular compiler and Case Store routes
- Two-fixture generalization
- Responsive widths 1920 to 390
- Browser workflow and client self-test
- Syntax and package integrity

3. API golden path evidence

The test suite creates a session, ingests a source asynchronously, reloads the projection, admits an event, prepares explicit change sets, attests a course, obtains a course-specific package, receives a server acknowledgment, settles the Candidate and verifies Defer creates no package.

4. Remaining validation before production

- Run the same contract tests against the real Fabri compiler and Anto runtime.
- Run security, privacy, load and multi-tenant isolation tests.
- Complete user testing with investment professionals.
- Verify external connector failure and recovery behavior.
